

Software Developer II - Interface Development (SSIS)

San Ramon, CA

Thor Group, Inc. is currently assisting a top notch healthcare company in San Ramon, CA in hiring a Software Developer who has Interface Development (SSIS) experience on a Direct Hire / Perm basis. This position will pay \$80-90K per year, depending on experience. If you are interested in this job, please forward your current resume to me at fyue@thorgroup.com. If you are not interested in this job, perhaps you know someone who might be. Please have them forward their resume to me!

Description:

Under the leadership of the Manager, Software Development, the Interface Developer is responsible for designing, developing, implementing and maintaining production interfaces using standard database and visual development tools. With oversight of a Team Leader, activities include working with users to define requirements, developing, testing, documenting and implementing solutions to meet specified requirements.

- Responsible for design and development of interfaces including data modeling and back-end database design;
- Develop, test, and document executable code according to functional and technical specifications using structured development methodologies and defined standards
- Maintain and troubleshoot existing processes with thorough understanding of the processes and interrelationship with other programs and processes
- Fine tune existing programs and processes. Understand the relationships, storage parameters and implications for any new development.
- Support management in recommending process enhancements and analyze new procedures to enhance efficiency.
- Assist in the development of project and test plans by providing reliable development estimates.
- Provide consulting services regarding use of other Microsoft technologies to enhance Development Methodologies.
- Support deployment of custom solutions when required to meet business needs
- Follow enterprise wide standards for maintenance and high performance
- Collaborate and consult with various I.S. customers and suppliers to set and meet service expectations and business requirements.
- Troubleshooting and configuring Interfaces
- Participate in staff, team, project and planning meetings as needed

Required Experience:

- 3+ years' experience with the design, development and maintenance of enterprise level Software Development Interfaces.
- A sound analytical ability and strong understanding of Database Logic is essential.
- Proven experience MS SQL Server (SSIS, SSRS), Biztalk, Erwin database modeling.
- Experience working SharePoint desirable.
- IIS 7/8, AD/ADFS, Windows Server 2008, Name resolution, Basic Firewall rules and Proxy knowledge.
- Demonstrated knowledge of structured development processes, technical project management, software testing and documentation.
- Prior Healthcare experience, Web Services and API experience is highly preferable
- Exposure to HL7, X12 and understanding of healthcare file format a plus
- Understanding of XML is highly preferable.
- Strong analytical and problem solving skills. Excellent oral and written communication skills both technical and user focused.
- Demonstrated ability to exercise good judgment, prioritize multiple tasks and problem solve under pressure of deadlines and resource constraints.

Required Education:

- Minimum B.S. in Computer Science, Information Systems or related field.

- Microsoft certifications desirable.

Additional Comments:

Authorization to work in the U.S. without sponsorship.

How to Apply:
